Professional Summary

Innovative and results-driven Software Developer with 4+ years of professional experience designing, building, and deploying scalable distributed web applications, microservices, and RESTful APIs using Python, FastAPI, React, and PostgreSQL.

Work Experience

Senior Software Engineer — CloudScale Systems (2022 - Present)
• Architected and implemented high-throughput RESTful APIs using Python and FastAPI, serving over 15,000 requests per minute with 99.98% uptime.
• Optimized relational database queries and PostgreSQL indexing strategies, reducing median response latency by [insert actual metric].
• Configured robust CI/CD automated deployment pipelines with Docker and GitHub Actions, cutting release turnaround times from 3 hours to 18 minutes.
• Mentored junior engineers on test-driven development practices, increasing unit test coverage across core modules from 62% to 94%.
Software Engineer — DataFlow Labs (2020 - 2022)
• Engineered real-time analytical dashboards using React, TypeScript, and TailwindCSS for monitoring financial telemetry.
• Refactored legacy monolith services into decoupled event-driven microservices communicating over Redis pub/sub queues.
• Integrated OAuth2 and JWT authentication protocols ensuring strict RBAC security compliance.

Education

Bachelor of Science in Computer Science | University of California, Berkeley (2016 - 2020) | GPA: 3.8/4.0

Technical Skills

• Languages: Python, JavaScript, TypeScript, SQL, Bash
• Frameworks & Libraries: FastAPI, Flask, React, Node.js, Next.js, Redux
• Databases & Storage: PostgreSQL, Redis, MongoDB, MySQL
• DevOps & Tools: Docker, Kubernetes, Git, GitHub Actions, AWS (EC2, S3), Linux, CI/CD

Projects

Distributed Job Scheduler
• Built an open-source distributed task queue in Python and Redis handling fault-tolerant asynchronous execution with exponential backoff.
• Implemented interactive monitoring CLI and web telemetry dashboard with React and WebSockets.
Intelligent Document Retrieval Engine
• Designed full-text semantic search microservice using FastAPI, vector embeddings, and PostgreSQL pgvector.
• Containerized complete application stack with multi-stage Docker builds for rapid cloud deployment.
